## Coldtainer for the transport of biological samples: CDC Affidea Group

The CDC Group, Centro Diagnostico Cernaia, has been developing diagnostic activities for almost 50 years at 32 offices located throughout the Piedmont area. Among the services provided: clinical analyzes, specialist visits, diagnostic imaging, physiotherapy, pediatric visits, occupational medicine and laboratory service.

### Why Coldtainer

CDC diagnostic center, manages itself the transport of biological samples from the multiple sampling points to the central analysis laboratory thanks to its fleet of commercial vehicles on which, starting from 2017, the Coldtainer F0915 NDN refrigerators have been installed. The transport must guarantee traceability and maintenance of the temperature in the 2-8 °C range, respecting all the regulations in force. The F0915 model was chosen because it's the largest in range and fits perfectly into the load compartment of the Fiat Doblò vehicles of the Stellantis group. Coldtainer was immediately appreciated by the operators for its ability to maintain temperatures, a fundamental requirement for the transport of thermosensitive biological materials.

# COLDTAINER

easy cooling, smart moving

CDC makes more than 3.7 million laboratory tests, 420,000 specialist visits and approximately 500,000 medical imaging tests each year, collaborating with over 1300 professionals.

## CDC using Coldtainer

- Possibility to reduce vehicle rental fees by renting standard vans instead of refrigerated vehicles
- Easy adaptation of refrigerated isothermal containers to other vehicles ensuring rapid insertion between one vehicle and another in the event of stops, changes to services or replacement of the vehicle fleet
- Maintaining temperatures even in unfavorable weather conditions and when the vehicle is parked with the engine stopped
- Ease of use of the monitoring software both for consultation while driving and for the transmission of reports to the recipient
